CONTRIBUTIONS TO TEACHING PRACTICE

Pedagogic Innovation and/or Development of Technology-enhanced Learning

UQAM/INF5153 – Software Design. To tackle the challenges of teaching software design in a COVID context, I re-designed the course into a "flipped classroom" one starting in Fall 2020. The "theoretical" part is published as openly accessible videos (creative commons license) on YouTube, representing more than 11 hours of content using the French language. The classroom time is used to work on case studies with small groups of students. Four universities now reuse this course material. Reusable material is available at the following URL: https://conception-objet.github.io/ (FR)

Leadership in Delivery of Educational Programs

ISW During Summer 2022, I have successfully completed the Instructional skill workshop offered by the McPherson institute to reflect on course design and delivery,

Experiential learning. As Associate Professor at *Université Côte d'Azur*, I oversaw designing and implementing a "project-based"/experiential approach for software engineering courses in the department (involving redesigning ten courses in the program). Following up on this work, I was invited to give invited talks at several education conferences, and I consulted with 17 different universities in France to provide feedback on this topic.

Course/Curriculum Development

UQAM/INF600G – Designing tailored applications for the aging population. This course is designed as a collaboration between UQAM and a Human-Computer Interaction team in France (funded by Quebec's research agency – FRQNT). We created the course to focus on designing and implementing software for the aging population.

Students are confronted with the multiple issues senior citizens face when using software and design adaptations to tackle these issues. Three institutions use the course (UQAM, Polytech Sophia, and IUT Nice – Côte d'Azur) and a collaboration with Toulouse (*Université Fédérale Toulouse – Midi Pyrénées*). URL: https://ace-design.github.io/champlain/ (FR)

Development/Evaluation of Educational Materials and Programs

2022 - ... I was selected to join the international expert pool of High Council for Evaluation of Research and Higher Education (HCÉRES), a French accreditation board in charge of evaluating universities.

2014 – **Engineering program evaluation**. As part of a "school of engineering" in France, programs must be evaluated every six years by the *Commission du Titre d'Ingénieur* (CTI) at the national level (equivalent to CEAB). I led the software engineering part of the accreditation application (which was successfully renewed for six years).

Other

Guest Lectures. I am often invited to give "invited lectures" in the context of other courses. I regularly gave interventions dedicated to empirical software engineering (UCA, UQAM), software design (Toulouse), and microservice architectures (ETS) in other programs.

Continuous Training. As part of *Centre National de la Recherche Scientifique* (CNRS) initiative for engineers' continuous training, I oversaw the courses "Agile software development" and "Business process modelling" for the *DevLog* national network in 2017.
